

ACTIVITY 2

Department	AIDS
Course Code / Course Name	DSA0602/ Data Handling and Visualization
Name	Swetha S
Register Number	192424049
Date	03/10/2026
Day	Wednesday

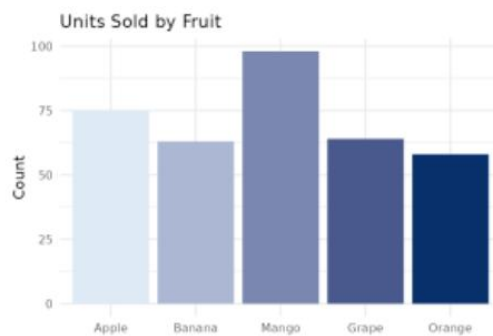

SESSION — ACTIVITY (20 MIN) • STUDENT HANDOUT • SLOT D

Redesign the Misleading Colored Chart

R.No: 35 Reg. No: 192424049 Name: SWETHA S

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Chart 1 – Units Sold by Fruit

1. What is this chart trying to show?

The chart shows the number of units sold for different fruits such as Apple, Banana, Mango, Grape, and Orange.

2. What's wrong with the color choice?

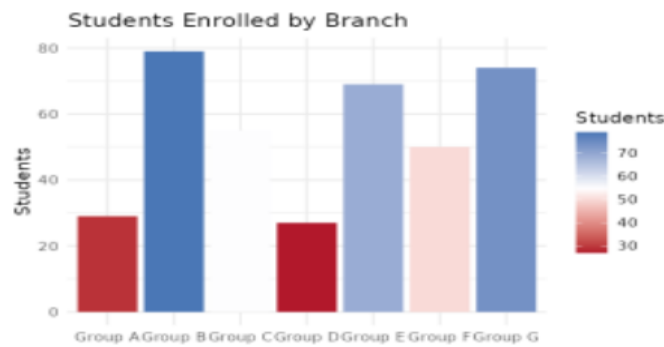

The bars use different shades of blue, which can make it look like the colors represent another variable. Since the chart only shows units sold, these different colors are unnecessary and confusing.

3. Propose a better color scheme:

Use one simple color for all bars because all bars represent the same type of data.

If one fruit needs to be highlighted, use one contrasting color only for that fruit.

Chart 2

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Chart 2 – Students Enrolled by Branch

1. What is this chart trying to show?

The chart shows the number of students enrolled in different branches/groups.

2. What's wrong with the color choice?

The chart uses different colors and shades based on the number of students, which makes the chart confusing. The colors suggest that color represents a separate category, even though the main information is the number of students.

3. Propose a better color scheme:

Use one consistent color for all branches/groups. If different branches need to be distinguished, use a few clear and distinct colors consistently for each branch, without using a color gradient based on student numbers.
